

ORS System Overview

The seminar gives a complete overview of the MIG21 and ORS system components involved in the order routing process. Using practical examples the functionality and the interaction of the components are explained. During the two-day seminar the participants will get knowledge about the application flow of both systems and their interaction. System administrators will become able to analyse and respond to certain events and to execute minor system configurations. As an example they will learn to evaluate log file messages.

Topics

MIG21/ORS System environment

- System modules involved
- Explanation of the application flow
